SUMMARY

Software engineering apprentice at IMT Atlantique, on a work-study programme at the French Public Finances Directorate (DGFiP), building a multi-agent system on in-house LLMs. Looking for a **permanent or fixed-term full-stack software engineer position from October 2027**.

PROFESSIONAL EXPERIENCE

Software Engineer, work-study — **Sep 2024 – Sep 2027**
French Public Finances Directorate (DGFiP) — Nantes, France

- VS Code extension with RAG to query documents from the editor, through a sovereign API to LLMs hosted in-house: sensitive data never leaves the DGFiP network.
- Redesign into a multi-agent system: expert agents, led by an orchestrator, delegate work to each other. AI-generated, adjustable prompts, for agents tailored to any project.

Stack: JavaScript, VS Code Extension API, Python, RAG, multi-agent systems, LLMs

Software Engineering Intern, R&D team — **May 2026 – Aug 2026**
P3 Hotel Software — Dublin, Ireland

- Sole R&D developer integrating P3's booking engine (built for Oracle OPERA) with the Mews PMS.
- The whole guest journey works with Mews: booking one or more rooms with real-time availability, PCI-compliant payment (deposits and refunds included), online check-in and check-out.
- Built company-specific Claude Code agents and skills, reviewed with my supervisor.

Stack: PHP, Laravel, third-party API integration, PCI payments, Claude Code

PROJECTS

AI-guided universal scraper, project lead — **2026**
MeetMagnet, startup project with IMT Atlantique — team of 6, 10 days

- Project management: milestones, shared backlog and task split.
- Two parts: Discover (AI) finds on its own the search URL of an unknown site and the path to each piece of information; Runner reuses these settings to scrape every day.
- In production at MeetMagnet, for about €9 per month per source.

Stack: JavaScript, Apify, OpenRouter, n8n, prompt engineering, vision AI

IMT'ventaire, inventory web app — **2025**
IMT Atlantique, agile project — team of 4

- PWA replacing unsupported inventory software: barcode scanning, equipment by building and room.
- Two agile sprints with a Product Owner; in production on an IMT server, with the real data.

Stack: TypeScript, React, Vite, Tailwind CSS, AdonisJS, PostgreSQL, Docker, REST API

Smash, bare-metal fighting game (C++)
IMT Atlantique, school project — github.com/aurelien2247/smash

- 8-bit two-player fighting game on Sextant, a teaching kernel, with no OS or standard library: keyboard and timer drivers, 320×200 VGA display in 256 colours, three threads synchronised by a spinlock.

EDUCATION

Engineering degree (Master's level) in software engineering, work-study — **2024 – 2027**
IMT Atlantique: software design, distributed systems, DevOps, agile, mobile — GPA 3.61

ATS preparatory class (maths, physics, engineering sciences) — **2023 – 2024**
Lycée Joliot-Curie, Rennes — admitted to IMT Atlantique

BTS SNIR, two-year degree in IT and networks — **2021 – 2023**
Lycée Félix Le Dantec

SKILLS

Programming languages: TypeScript, JavaScript, Java, PHP, Python, C, C++, Kotlin, Dart, HTML, CSS
Frameworks: React, Angular, Node.js, Spring, Laravel, AdonisJS, Flutter, Qt, Tailwind CSS, Astro
AI: RAG, multi-agent systems, LLMs, Claude Code **Methods:** agile, project management
Tools: Git, GitHub, Docker, PostgreSQL, Postman, npm, VS Code, Jira, Figma, Notion
Languages: French (native), English (4-month internship in Ireland)

INTERESTS

Communications lead of the student arts society, co-organised a cultural trip for 60 students, helped organise the gala; football (15 years).
